

**Subject:** Proposal to Implement Kabilah – An AI-Powered Sidekick for Our Nursing Team

**Email:**

Dear [Boss's Name],

I hope you're doing well. As a nurse committed to enhancing patient care and supporting our team here at [Hospital Name], I'm excited to propose the integration of Kabilah, an AI-powered sidekick specifically designed to solve the most pressing issues for our inpatient nursing workflows.

**Key Benefits of Implementing Kabilah:**

- **Consistent and Complete Verbal Handoff:** Kabilah offers a proprietary solution for patient handoffs. This system guarantees every verbal handoff is thorough and accurate by notifying nurses of any missing critical information and providing corrections for inaccuracies, ensuring reliable and effective communication.
- **Simple Digital Report Sheets:** Kabilah revamps fragmented paper report sheets into a clean digital format that saves time and eliminates the risk of lost or incorrect information. Nurses no longer need to rewrite all patient details at the beginning of each shift by hand, and everything they need is consistently in one place.
- **Guided Task Management:** Kabilah streamlines task management by generating a context-aware to-do list that prioritizes urgency and organizes tasks for optimal efficiency. Their platform simplifies workflows, ensuring the highest degree of patient safety while making the day more manageable for each nurse.
- **Efficient Charting & Flowsheet Completion:** Kabilah integrates within our tech stack, eliminating the need for redundant charting. Nurses can export their report sheets to various note types and flowsheets within our EHR, significantly reducing documentation burden.

**The Value for Our Hospital (ROI):**

Using Kabilah's cost-saving calculator, early estimates suggest potential savings of approximately \$XXX for our hospital. These savings would come from:

- **Enhanced Patient Safety:** With the suite of features mentioned above, we can improve the accuracy of patient information at handoff with timely, actionable insights. These automated systems would enable our team to work more efficiently, reducing errors, and ultimately **reducing the total number of adverse events** and their associated costs.
- **Improved Nurse Satisfaction:** By alleviating administrative burdens and improving communication, Kabilah fosters a more positive working environment, which is crucial for **retaining skilled nurses**. This will lead to a significant decrease in turnover costs.

**Next Steps:**

I believe implementing Kabilah aligns with our commitment to excellence in patient care and staff well-being. I kindly request the opportunity to explore this solution further—perhaps through a **demo or a meeting with a Kabilah representative**—to better understand its capabilities, refine our projected savings, and discuss how it can be tailored to our hospital's needs. We can reach out to their team through the form on their website <https://www.kabilah.com/> or via email at [support@kabilah.com](mailto:support@kabilah.com).

Thank you for considering this proposal. I am confident that Kabilah can be a transformative tool for our nursing staff and contribute to our hospital's ongoing success.

Sincerely,

[Your Name]

[Nurse, Your Department]
